GFI LANguard Network Security Scanner

GFI LANguard Network Security Scanner provides an integrated tool that performs both network security vulnerability assessment and patch management. The latest release of GFI LANguard Network Security Scanner incorporates a comprehensive security vulnerability checking capability based on OVAL (Open Vulnerability Assessment Language) and the SANS Top-20 Internet Security Attack Targets to provide more than 15,000 vulnerability checks. In addition, GFI LANguard Network Security Scanner can scan for open ports as well as blacklisted applications and USB devices. Patch management capability supports 38 languages and can deploy as well as roll back patches. A built-in network and software auditing feature provides reports showing open ports, installed software, password strength, and connected USB devices.
