

2004 SQL Server Magazine Readers' Choice Awards

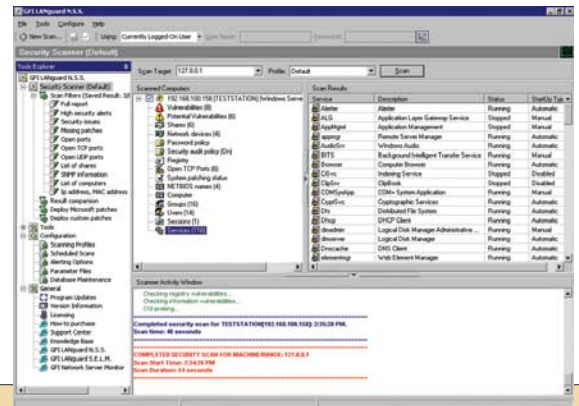

Winning Products Secure Databases and Applications

With the proliferation of interconnected applications sharing data across intranets and the Internet, security has become more crucial than

ever to organizations of all types. In fact, security may be the most important aspect of any SQL Server professional's job. But it doesn't have to be the most time-consuming or difficult. The following winning product helps make databases and their applications more secure.

Best Security Scanner. GFI LANguard Network Security Scanner (N.S.S.) can scan entire networks for security vulnerabilities such as missing security patches, old service packs, open shares, open ports, and unused user accounts. With this information, which GFI LANguard N.S.S. displays in customizable reports, GFI can lock down your networks against intruders. GFI LANguard N.S.S. also lets you remotely deploy missing patches and service packs in applications such as SQL

Server and the OS. Readers noted the low starting price (\$315 for 25 IPs) as a big plus.
